# TOPS IN TWO WAYS

## WINNER OF 1951 MISSISSIPPI 5-ACRE CONTEST

1

Yes, Stoneville's DELFOS 9169 was the first-prize cotton in Mississippi's 1951 5-Acre Cotton Contest . . . the second time in three years that Delfos has won this important honor. Producer of the prize-winning yield was Charlie Clark, young Yazoo City Farmer. His total yield for the five acres was 8,915 pounds of lint . . . or an *average yield per acre of 1,783 pounds*. The Mississippi winner topped the recently announced "sweepstakes" 5-acre winner by almost 600 pounds.

Stoneville Pedigreed Seed Company is proud that its famous DELFOS 9169 seed had a part in producing this record yield.

ALL SMILES are Charlie Clark (right), young farmer of Yazoo City and winner of the 1951 Mississippi 5-Acre Cotton Contest, and George Rea Walker (left) of Stoneville Pedigreed Seed Company, Stoneville, Miss. Probable topic of conversation—the advantages of DELFOS 9169 seed.

## TOP PERFORMANCE IN MECHANIZATION TEST

2

The 1951 mechanization test, conducted by the Delta Experiment Station of Stoneville, reflected the all-around superiority of DELFOS 9169 and its complete adaptability to modern mechanization methods. Not only did it produce more lint per acre, but it showed *better* storm resistance, *better* machine "picker-bility" and *less* "picker waste" than any other cotton in the test. These features naturally result in higher cash income per acre.

## IT ALL ADDS UP TO A CHAMP!

Early maturity, heavy yields (with big, easy-to-pick bolls), better storm resistance and complete adaptability to modern mechanization methods . . . these are some of the reasons it will pay you to plant DELFOS 9169 in 1952. You're sure to get extra income per acre.

## Clarks Cotton Production Indicates World High Cotton Yield

STONEVILLE, Miss., Mar. 5—  
A young Mississippi Delta farmer  
may have set a world record with  
his 1951 cotton production on five  
sandy loam acres, according to  
current indications. C. Q. Clark  
of Yazoo City already has been  
declared the winner of the 1951  
Mississippi Five Acre Contest for  
his five acre yield of 8,915 pounds  
of lint cotton. His per acre average  
was calculated at 1,783 pounds in  
pre-harvest field tests made for  
contest officials.

J.M. Smith of Edgefield County,  
South Carolina, was named as  
world champion cotton producer  
for 1951 by a national farm maga-  
zine, however. Mr. Smith's total  
five acre production was report-  
ed at 8,380 pounds, for a 1,676  
pound per acre average. By these  
figures, Mr. Clark's total yield  
was 535 pounds higher, and his  
per acre yield 107 pounds higher.

Mr. Clark, in telling of his pro-  
cedure in producing the contest  
winning cotton crop, said that  
he applied 105 pounds of an-  
hydrous ammonia before plant-  
ing. He planted **Delfos 9169** certi-  
fied seed on April 26. He hoed  
three times and flamed once. He  
cultivated shallow and only when  
needed.

In his insecticide program, he  
made five spray applications from  
ground machines and dusted nine  
times by plane. He started har-  
vesting on September 3.

Delfos 9169

ANOTHER FAMOUS "STONEVILLE" COTTON

## Stoneville's New delfos 9169

(STRAIN 3292 FOR 1952 PLANTINGS)

The new DELFOS 9169, developed particularly for rich bottom land, is proving highly adaptable in many other areas — especially in the Coastal Bend of Texas. DELFOS 9169, noted for its earlier maturity, produces heavy yields with big, easy-to-pick bolls, with excellent staple length. The high processing value of both its lint and its seed means *extra income per acre*.

These splendid characteristics make Stoneville's new DELFOS 9169 a favorite cotton in many areas. It will pay you to investigate DELFOS 9169 for 1952 plantings.

### CHARACTERISTICS

**PLANT TYPE**—Medium vigorous, spreading and prolific.

**BOLL SIZE**—65 to 75 per lb. of seed cotton.

**MATURITY**—Early for a big boll cotton.

**PICKING QUALITIES** — Good bolls, rather round, mostly five lock, and opens well.

**STAPLE LENGTH**—1-3/32 to 1-5/32.

**LINT PERCENTAGE**—35 to 38 percent.

**LINT CHARACTER** — Medium in fineness, strength and uniformity.

**FOLIAGE**—Medium.

**STORMPROOFNESS**—Good.

**SEED MILLING VALUE**—Extra High.

STONEVILLE PEDIGREED SEED COMPANY, INC., Stoneville, Mississippi

PEDIGREED  
PREPOTENT  
PRODUCTIVE SEEDS

## A WORD ABOUT STONEVILLE PEDIGREED SEED COMPANY

For thirty years, Stoneville Pedigreed Seed Company, located at Stoneville, in the heart of Mississippi's great cotton-producing Delta, has devoted its resources to developing and maintaining fine strains of pedigreed seed, both cottons and oats.

Founder and president of Stoneville Pedigreed Seed Company is George B. Walker, known around the world for his development of famous Stoneville and Delfos cottons. Associated with Mr. Walker in developing these outstanding cottons is a research staff composed of C. A. Tate, plant breeder and production manager, George Rea Walker, plant breeder and general manager, and C. W. Manning, plant breeder and geneticist. This staff is kept busy developing, testing and improving foundation strains. From these registered breeders' foundation stocks, the company supervises the growth of increase lots in order to produce these quality seed in large quantities for cotton growers all over the world.

Three varieties of Stoneville cottons have won acclaim in the American cotton belt and in other cotton areas all over the world. These varieties

are Stoneville 2-B, Delfos 9169 and Stoneville 3202.

Today, Stoneville is one of the most copied cotton seed on the market. As a matter of fact, eight commercial varieties of cotton on the market today are selections of Stoneville strains.

In addition to its scientific development of superior strains, Stoneville Pedigreed Seed Company handles and processes its seed with the utmost care. Ultra-modern equipment and storage facilities assure the grower that when he buys Stoneville seed he can be sure of getting seed of the highest quality. For some time now, the company's sales slogan has been "It'll cost you less to plant the best."

From its beginnings, Stoneville Pedigreed Seed Company has tried to develop seed which are bred to give the grower a better balance of all those characteristics necessary for superior all-around cotton.

In addition to its three outstanding cottons, the company has developed the famous Nortex 107 Oats, which are now in demand by farmers everywhere.

ONE OF THE FAMOUS "STONEVILLE" COTTONS

# STONEVILLE'S 2-B

(STRAIN B-7 FOR  
1952 PLANTINGS)

*The Perfect BALANCED Cotton.!*

## THE EIGHT CHARACTERISTICS OF SUPERIOR COTTON

- ★ HIGH YIELD
- ★ EASE OF PICKING
- ★ CONSISTENT FIELD PERFORMANCE
- ★ UNIFORM STAPLE LENGTH
- ★ GOOD LINT PERCENTAGE
- ★ EXCELLENT MILL PERFORMANCE
- ★ HIGH TEXTILE STRENGTH
- ★ HIGH GRADE SEED

STONEVILLE 2-B combines these eight characteristics in *perfect balance* to form a cotton that has given a performance record unequalled in the field and in Experiment Station Tests. STONEVILLE 2-B has been accepted among farmers, ginnermen, merchants and mill men as a measuring standard of the characteristics of top quality cotton. This position of "favorite" among the men who know is not a matter of chance.

The superior qualities of STONEVILLE 2-B are the end products of tedious, scientific selection and breeding over a period of many years. The record of STONEVILLE 2-B is one of continuous dependability year after year — one big reason why STONEVILLE 2-B is preferred by more and more successful growers throughout the cotton areas of the world.
